Вот обновлённая англоязычная документация с учетом **возможности редактирования и удаления рецептов**. Вы можете вставить этот текст в Word и сохранить как PDF.

Documentation: Recipe Helper

(Format: Word → Save as PDF → Upload to `/docs`)

1. Introduction

Recipe Helper is a web application for storing, searching, editing, and managing cooking recipes.
Goal: Make it easier to store and manage personal recipes.

---

2. Features

2.1. Core Functionality

- 📌 **Add recipes** (title, ingredients, instructions)
- 🔍 **Search by ingredients** (shows recipes based on available ingredients)
- 📋 **View all recipes** in a simple and readable list
- ✏️ **Edit existing recipes** (update title, ingredients, or instructions)
- 🗑 **Delete recipes** (remove unnecessary or outdated entries)

2.2. Technologies Used

Component	Technology
Frontend	HTML, CSS, Jinja2
Backend	Python (Flask)
Database	JSON file

## 3. Interface Screenshots

*(Insert 5–6 screenshots here)*
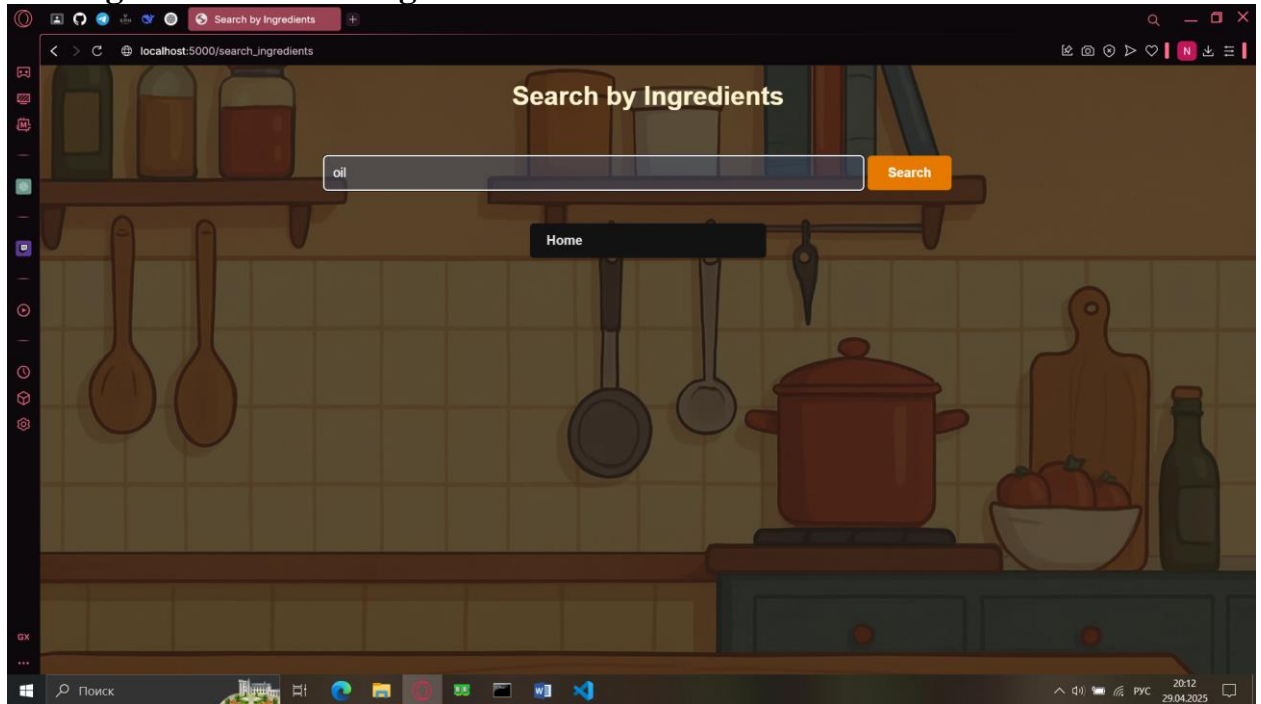

3.1. Home Page

Description: Navigation menu with buttons to access all features.
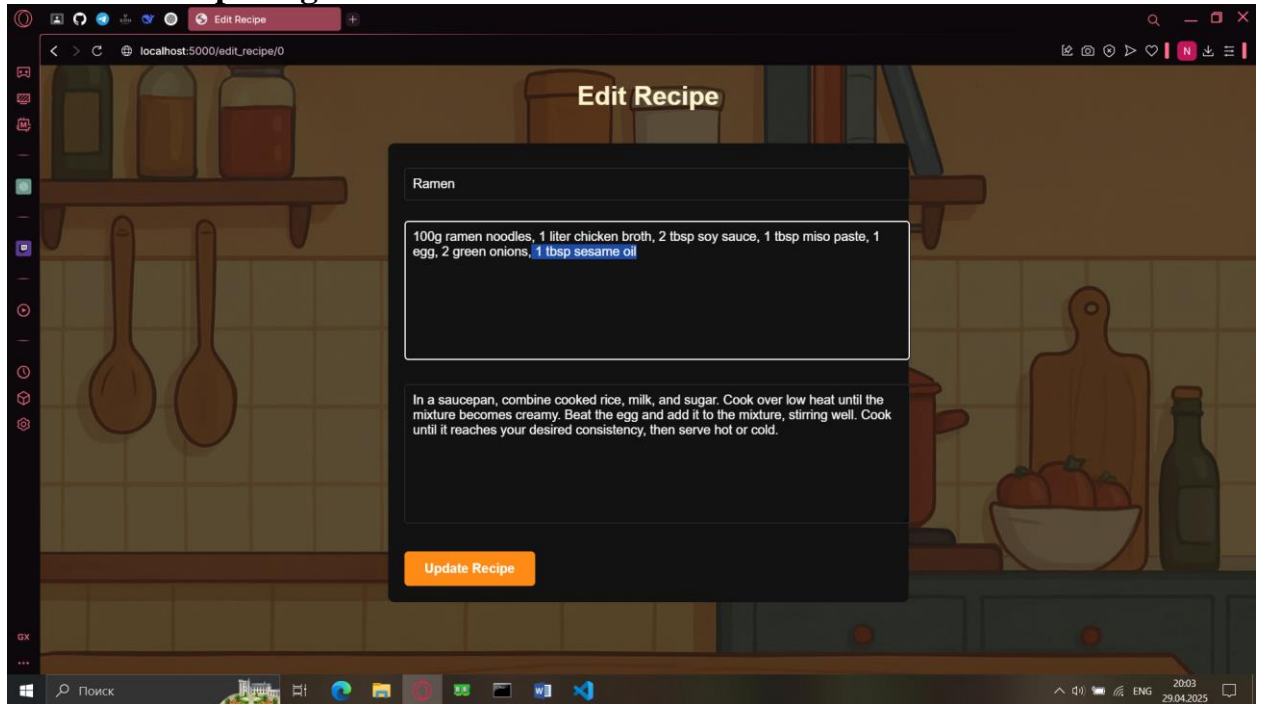

3.2. Add Recipe Page
